

BRIAN KIPRONO

Paid Media & Growth Marketing Specialist

Performance marketing portfolio showcasing acquisition, analytics, SEO visibility, engagement and revenue-focused reporting.

30.5K	4.41M	\$2.42K
Search clicks	Search impressions	MRR

Selected performance evidence

The following dashboards are presented as portfolio evidence. Metrics are shown as they appear in the supplied screenshots; no additional attribution is assumed where the screenshots do not establish it.

PROFILE

Paid Media & Growth Marketing Specialist with hands-on experience across Google Ads, Meta Ads, CRM automation, email marketing, conversion tracking and performance reporting.

CORE CAPABILITIES

Paid Media	Google Ads, Meta Ads, campaign setup, targeting, creative testing and budget optimization
Growth & CRO	Funnel analysis, conversion optimization, A/B testing and landing-page performance
Analytics	GA4, GTM, Looker Studio, Power BI and KPI reporting
CRM & Lifecycle	GoHighLevel workflows, lead nurturing, email/SMS sequences and customer journeys
SEO & Search	Search Console analysis, search visibility, clicks, impressions, CTR and position

PERFORMANCE APPROACH

I connect channel-level performance to business outcomes: traffic quality, conversion efficiency, lead progression, engagement and recurring revenue. Dashboards and CRM data help identify where performance changes and what part of the funnel should be optimized.

CASE STUDY 01 — WEB ANALYTICS

Traffic, engagement and user behaviour

8.5K	12K	45K	3.8	51%	6m 26s
Unique users	Sessions	Pageviews	Pages/session	Bounce rate	Session duration

The dashboard shows growth across users, sessions, pageviews, pages per session and session duration, alongside referral sources and high-traffic pages. I would use this view to identify traffic sources, engagement patterns and pages that can inform paid-media, content and CRO decisions.

CASE STUDY 02 — REVENUE PERFORMANCE

MRR and revenue-growth monitoring

\$2,419.13	\$1,512.66	\$5,434.57	74.8%
MRR	MRR growth	Net volume	MRR growth rate
+166.9%		+82.8%	+13.7%
vs comparison period		vs comparison period	vs comparison period

This dashboard provides a revenue-level view over the last three months compared with the previous period. These figures can be used alongside acquisition and CRM data to evaluate whether growth is translating into recurring revenue.

Attribution note: the screenshot does not establish that paid media alone caused these revenue changes, so this portfolio presents them as business-performance metrics rather than direct paid-media attribution.

CASE STUDY 03 — ORGANIC SEARCH PERFORMANCE

Search visibility and organic traffic

30.5K	4.41M	0.7%	9.1
Total clicks	Total impressions	Average CTR	Average position

The Search Console view covers approximately April 9 to July 6, 2026. It shows 30.5K clicks from 4.41M impressions, with an average CTR of 0.7% and average position of 9.1.

I use this data to monitor search visibility, identify changes in click volume and impressions, evaluate CTR opportunities, and connect organic-search behaviour with wider acquisition and conversion reporting.

PERFORMANCE MARKETING MINDSET

My approach is to look beyond surface-level traffic metrics and connect acquisition data with engagement, conversion behaviour, CRM progression and revenue performance.

Google Ads & Meta Ads — campaign structure, targeting, creative testing, budget allocation and optimization.

Tracking & Analytics — GTM, GA4, conversion tracking, dashboards and KPI reporting.

CRM & Automation — GoHighLevel workflows, lead nurturing, email/SMS sequences and customer journeys.

Growth — funnel analysis, CRO, testing and performance-driven decision making.
